

ROLLING MILL BEARINGS

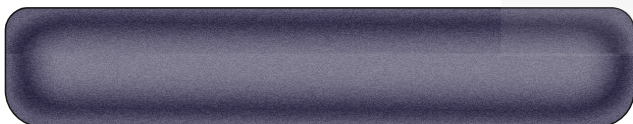

4 Row Cylindrical Roller Bearings are used very successfully for Rolling Mill Work Roll and Support Roll applications with its extreme radial load carrying capacity, low friction values and suitability for high speeds properties.

Rolling mill bearings are exposed to heavy working conditions which consists high loads and heavy impacts. Therefore rolling mill bearings must have some different properties to be fit for these conditions distinctly from the standard bearings. Das Lager Germany 4 Row Cylindrical Roller Bearings are made of case-carburized steel which gives the best performance against high loads and heavy impact conditions. Case hardened steel consists a combination of strong and also ductile internal structure and hard, wear-resistant outer surface. Internal structure prevents the bearing damages under heavy impact conditions and also increases the resistance against misalignment and dirt conditions.

- Special Case Carburized Steel Material
- High Capacity Of Tolerating Radial Load
- Advanced Endurance Of Impact Load
- Eminent Resistance To Abrasion
- High Tolerance Against Dirt Corrosion
- Efficient Prevention Againsts Axial Misalignment
